(54) CAMERA DEVICE AND METHOD FOR OBTAINING INFORMATION

(57)Abstract:

PROBLEM TO BE SOLVED: To provide a camera device in which a photographed place and latest information relating to the place can be used simply together with image information anytime and anyplace.

SOLUTION: A camera device 10 receives radio waves from a global positioning system(GPS) satellite 1, and it acquires position information on its own position. In addition, on the basis of the position information, map information and position-related information such as difference position or the like for a differential GPS (D-GPS) are acquired via the Internet 40. Then, the position-related information which is acquired via the Internet 40 and photographed image information are correlated. Consequently, a photographed plate and latest information related to the place can be used simply together with the image information anytime and anyplace.

LEGAL STATUS

[Date of request for examination] 13.09.1999

[Date of sending the examiner's decision of rejection] 05.03.2002

[Kind of final disposal of application other than the examiner's decision of rejection or application converted registration]

[Date of final disposal for application]

[Patent number]

[Date of registration]

[Number of appeal against examiner's decision of rejection]

[Date of requesting appeal against examiner's decision of rejection]

[Date of extinction of right]
